The first development version was announced to the public at the AutoCAD Users Group annual convention in November 1982. To understand AutoCAD's architecture and history, it is useful to consider how CAD users and programming developers have evolved since its inception. The history of CAD design and drafting has seen the replacement of many systems and platforms, each with its own unique features, but, to simplify, we can see the evolution of CAD software into its modern form as it has developed from the early desktop version, through AutoCAD version 2, to AutoCAD LT. Original 1982–1984 version: For the Macintosh II, Macintosh Plus, IICI, and IICI Plus (running Mac OS 7.1.1 and natively supporting a color graphic engine) This was the first release of AutoCAD for the Macintosh. Because Apple had moved to 32-bit processor architectures, the memory requirements had changed, and so had the graphics capabilities. Macintosh II The Mac II was the first Apple computer to utilize a 32-bit processor and 4 GB of RAM. It also featured a Motorola 68000 CPU, which was a new type of processor not previously available for the Mac. The Mac II included 256 KB of flash RAM (equivalent to 256 kB of RAM). It also supported color graphics at 32, 64, or 256 colors. The Mac II came with 16 MB of RAM for

So I woke up today thinking about how to be a good citizen of this community, and, well, to be fair, a good citizen of the world. Today is the first of May, the day that America celebrates its bicentennial. The last thing we need is a day in which we pretend the United States isn’t still the best country in the world. Maybe what we need is to remember the American dream. I’m not talking about growing up poor and becoming a wealthy capitalist.
