History Autodesk Autodesk began as a small company in California in 1968 and was founded by Doug Sax and Gary Scott. The first product they introduced was the Two-Function Woodworking Workbench, created and marketed by their product development company, Woodward. Later, they developed AutoCAD Product Key as a DOS PC application which could work in both text mode and graphics mode simultaneously. Sax stated in a 2012 interview that the product was created during the early 1980s, when "people had to do engineering, drafting and design work on mainframe computers." Sax gave the first user demonstrations of the product to former Autodesk colleague and current president Steven Sassa, and Sax's marketing contacts at the Southern California Microcomputer Users Group (SCMUG), the largest microcomputer user group in the United States. AutoCAD Activation Code was released for the Apple Macintosh in 1991. Sax stated in the 2012 interview that the Macintosh version was created by programmers at Autodesk's Los Angeles office, and Sax added that many of the application's features were developed for the OS. Sax also stated that the first version of AutoCAD was written in the application's native programming language, SmallTalk, as well as Assembly for the DOS platform. Originally released as a DOS program, AutoCAD was made available as a Windows version for use on 286 and 386 computers in October 1987. Sax stated in the 2012 interview that version 1.0 was developed in June 1988, and that by 1990, the company had released 30 to 40 beta versions of the application, that it was on track to release its first public beta version of the application in late 1990 or early 1991, and that by the end of 1991, Autodesk had sold roughly 10,000 copies of AutoCAD. Sax stated in a 2004 interview that the product was developed over a four-year period, and that it was first demonstrated at SCMUG in May 1989. Sax stated in the 2012 interview that the AutoCAD team included "about a dozen different groups, and about 15 to 20 people." In 1991, Sax stated in the 2012 interview that Autodesk marketed AutoCAD as a generic design program, not as a CAD program, and Sax also stated that Autodesk had never designed CAD software. In the 2012 interview, Sax stated that his marketing comments were intended to define the difference between AutoCAD and other existing and potential products of the day. Sax stated in the 2004 interview that at the time of the product's initial
