Harvey Ahrens Harvey Ahrens (7 August 1828 - 11 December 1884) was a German entomologist who specialised in Coleoptera. Ahrens was born in Cologne, Germany and was the son of a businessman. He was educated at the University of Bonn (1844-46) and University of Bonn (1846-48). In 1849 he was a military taxidermist (the predecessor of zookeepers) in Paris. From 1849 until 1851 he worked as the taxidermist for Oscar Breitfuss in Berlin. In 1851 he became a teacher at the Athens Academy in Athens. He published "De Diptera Salivariorum Genera: Libellus" in 1854, "Geschichte der Deutschen Schmetterlinge" (History of the German butterflies) in 1855, and "Die Blatttiere Europas" (European butterflies) in 1857. He died in November 1884 in Corfu, Greece. References

Q: Image wont stick in Navigation drawer Hi all I have a image in my navigation drawer, I want to slide in when a user clicks on a menuitem. I used a semi transparent png to achieve this. Only the first image sticks and the rest fade in, I'm not sure what I'm doing wrong. I added the image for the top item, and another one to represent the selection as well.

```
public class DrawerItemClickListener implements ListView.OnItemClickListener {
    public static final String TAG = "ItemClickListener";
    @Override public void onItemClick(AdapterView parent, View view, int position, long id) {
        selectItem(position)
```

Features Key:

o

So I have tried:

I would like to capture the information in the txt file into the string and print that to the screen The txt file was made by a python program and looks like this: \$ echo "hello world" hello world \$ echo "this is just some random text" This is just some random text

A: You need to use the document.getElementById function to get the ID of the element, then use that in your Javascript to access the.innerHTML property of the div, saving the data you want to the code in another file. This should cover it (not tested code, so I can't be sure that the file you were using has all the data you need - you should look for a character to represent ' ', or some sort of end of line character).
